

Developmental Screenings During Well-Child Visits

As a healthcare provider, you play a critical role in monitoring children's growth and development and identifying problems as early as possible. The American Academy of Pediatrics (AAP) recommends that healthcare providers do the following:

- Monitor the child's development during regular well-child visits.
- Periodically screen children with validated tools at recommended ages to identify any areas of concern that may require a further examination or evaluation.
- Ensure that more comprehensive developmental evaluations are completed if risks are identified.

Well-child visits help monitor the growth and progress of children and young adults through validated screening tools and counseling. Assessing changes in a child's physical, emotional and behavioral health — with the help of the Early and Periodic Screening, Diagnosis and Treatment (EPSDT) program — can help lessen the risk of serious and long-term health issues.

Validated Tools for Developmental Monitoring & Screening

Resources: [HPPlans.com/DevelopmentalScreenings](https://www.hppplans.com/developmentalscreenings)

Timeframe: 9 months, 18 months, 30 months

Developmental screening is more in-depth than monitoring and may help identify children with a developmental risk that was not identified during developmental monitoring.

The Pennsylvania Department of Human Services (DHS) and the Pennsylvania EPSDT program requires all Medicaid providers to screen for developmental delays during well-child visits. Providers must document all surveillance (monitoring), screening and referral activities, and must include a copy of the validated development tool used to conduct the screening.

Milestone Tracking

Resources:

- For providers: <https://www.cdc.gov/ncbddd/actearly/hcp/index.html>
- For parents: <https://www.cdc.gov/ncbddd/actearly/milestones/index.html>

Timeframe: Varies

It is important for clinicians to teach parents and caregivers to recognize developmental milestones. Research has confirmed that parents are reliable sources of information about their child's development. Parents who are aware of developmental milestones can observe their child and inform their healthcare provider about any concerns they may have about their child's development. Pediatric healthcare providers can provide parents with milestone checklists to track their child's milestones at home.

Lead Screenings during Well-Child Visits

Resources: [HPPlans.com/Lead](https://www.hppplans.com/Lead)

Timeframe: 12 months, 24 months old

In addition to developmental screening, all Jefferson Health Plans Medicaid and CHIP members are required to have a lead test completed by 12 months old and again at 24 months old. If a child's blood lead level is above 3.5 micrograms per deciliter, the CDC recommends intervention through follow-up blood tests and a review of possible sources of contamination, including housing, food, and toys.

Quality Care Plus Program

Resources: [HPPlans.com/QCP](https://www.hppplans.com/QCP)

If your practice participates in our Quality Care Plus (QCP) primary care incentive program, your incentive payout correlates to the percentage of lead screenings performed in children before their second birthday and percentage of children screened for developmental delays in children 0-3 years of age.

CPT Coding

Provider offices should use CPT codes **96110** and **96127**, which are the correct codes for developmental screenings and emotional and behavioral assessments. If you identify issues in children and young adults under age 21, you should utilize the standard assessment tools and include the CPT codes in your claim submissions.

Code	Definition	Frequency
96110	Developmental screening with scoring and documentation per standardized instrument.	Limited to a frequency of 3 units per date of service for children and young adults up to 21 years of age.
96127	Brief emotional/behavioral assessment with scoring and documentation per standardized instrument	Limited to a frequency of 3 units per date of service for children up to 12 years and older.
83655	Lead screening	12 and 24 months of age and as clinically indicated.

We're Here to Help

If you have any questions regarding EPSDT, please contact Jefferson Health Plans' Healthy Kids department at **215-967-4690**. If your questions are about CPT codes, please contact our Provider Services Helpline at **1-888-991-9023** (M-F, 9:00 a.m.—5:30 p.m.).
